

Kevin Williams

Software Developer | Veteran | Problem Solver

Riyadh, Saudi Arabia | +966 59 469 4139 | kewilliamsdev@gmail.com | <https://www.linkedin.com/in/kevin-e-williams> | <https://github.com/kewilliams92>

Full-stack software developer specializing in React and Python, with expertise in building scalable web applications from database to UI. Architected and delivered FlashQuiz end-to-end, implementing responsive React interfaces and Django REST APIs. Designed complex financial data models for BudgetBox with Plaid API integration, while establishing React Context patterns for efficient state management across the application. Mentored team members on front-end best practices, enabling adoption of modern React patterns. Currently expanding full-stack capabilities with Golang while leveraging systematic problem-solving skills to bridge backend architecture with intuitive user experiences.

TECHNICAL SKILLS

Languages: *JavaScript, TypeScript, Python*

Frontend: *React, Next.js, TailwindCSS, HTML, CSS*

Backend: *Node.js, Express.js, Django, Flask*

Databases/ORMs: *PostgreSQL, Prisma, Drizzle, Sequelize*

Tools/Other: *Git, Stripe, Clerk, Railway, Render*

TECHNICAL PROJECTS

BudgetBox | Developer

Apr 2026 | [Link to the project](#)

A modern, full-stack personal finance management application that helps users track their income and expenses, plan budgets, and gain insights into their financial health.

- Architected secure financial data models integrating Plaid API transaction data with PostgreSQL database, designing custom schemas that enabled real-time expense tracking and budget management for authenticated users across multiple bank accounts.
- Engineered Plaid API integration workflow managing three-token authentication system (link, public, and access tokens), processing JSON transaction data and automating financial data synchronization that allowed users to seamlessly connect their bank accounts to the application.
- Implemented robust authentication architecture using Clerk.js integration with custom decorators, ensuring secure route protection for sensitive financial data while enabling seamless user login experiences across frontend and backend systems.
- Led cross-functional API development collaborating with 2 frontend developers to design RESTful endpoints using Axios, establishing data flow patterns that connected React components to Django backend services for optimal user experience.

FlashQuiz | Developer

Apr 2026 | [Link to the project](#)

An application that creates flashcards using both the Wikimedia API, and OpenAI API

- Engineered AI-powered flashcard generation system addressing the challenge of creating initial study materials, implementing OpenAI API integration with custom prompt engineering that automatically generates 5 starter flashcards to eliminate the barrier of not knowing what information to prioritize.
- Built seamless API orchestration pipeline connecting Wikimedia API data extraction with OpenAI processing, designing error handling that falls back to topic-based generation when Wikipedia pages don't exist, ensuring consistent user experience regardless of content availability.
- Architected full-stack application using React frontend with TailwindCSS and Framer Motion, integrated with Django REST backend and PostgreSQL database, implementing real-time loading indicators that provide user feedback during API processing workflows.
- Designed scalable database schema with relational models for Decks, Flashcards, and user Feedback, enabling personalized study deck management while maintaining data integrity through foreign key relationships and user-specific content isolation.

EXPERIENCE

Correctional Officer III | North Carolina Central Prison | Raleigh, NC

Sep 2017 - Aug 2019

- Owned operational logistics for 240+ individuals across multiple workflows, streamlining scheduling processes that reduced unpredictability and created safer environments.
- Executed risk assessment protocols through strategic inspections and behavioral analysis to proactively identify and eliminate security threats before impacting operations.
- Developed communication strategies using empathetic engagement to gather intelligence, preventing security incidents against 20+ team members and reducing workplace tension.
- Implemented systematic documentation processes with hourly logs and shift handoff reports, enabling seamless team information transfer and data-driven decision making.
- Developed training programs for new team members using "fair but firm" methodology, reducing team conflicts and improving workplace safety through standardized approaches.
- Coordinated resource management and crisis response systems, maintaining inventory databases and leading cross-functional teams through real-time problem-solving and conflict resolution.

Administrative Specialist | United States Marine Corps | San Diego, CA

Aug 2011 - Aug 2015

- Managed personnel development programs for 12 team members through performance tracking and mentoring to optimize team performance and individual growth.
- Owned mission-critical workflows processing 10+ daily executive communications, reducing processing errors and improving senior leadership satisfaction.
- Maintained secure database systems for 41 units encompassing 14,000+ personnel, transferring data between systems to ensure accurate payroll processing under Secret Security Clearance.
- Coordinated 52-hour joint training operation with multiple aircraft groups, providing operational support that enhanced combat readiness and unit interoperability.
- Earned Certificate of Commendation for managing 500+ personnel operations in Bahrain while developing award processing systems that streamlined recognition programs.

EDUCATION & TRAINING

Code Platoon – Full-Stack Web Developer Bootcamp

Jun 2025 – Sep 2025

- Completed 750-hour immersive program, developing FlashQuiz (AI-powered flashcard app) and BudgetBox (personal finance platform) using JavaScript, React, Python/Django, and PostgreSQL.
- Led team of 4 developers on capstone project, applying full-stack development skills to build production-ready applications with integrated APIs and secure authentication systems.

Boot.dev – Backend Development

Apr 2024 – May 2025

- Completed 50% of self-paced backend curriculum with sustained weekly practice, building command-line applications and mastering HTTP/REST APIs, authentication, and SQL fundamentals.
- Developed backend proficiency in testing frameworks, relational database modeling, and deployment strategies while strengthening server-side development skills.

Fullstack Academy – Web Development Bootcamp

Nov 2022 – Feb 2023

- Completed 750-hour intensive program building full-stack applications with React, Node.js, Sequelize ORM, Express.js, and PostgreSQL, implementing comprehensive CRUD functionality.
- Established full-stack foundation in user authentication, API development, testing suites, and database design that formed the technical base for advanced bootcamp progression.
